

DataBox

The professional, transportable and lockable case box for working on the move with a notebook and printer. DataBox is a robust case box with a removable trolley system for notebooks. The practical and especially robust aluminium case with a fold-out printer pocket allows the user to work professionally whilst on the road and guarantees the secure transportation of the notebook and printer! The new, pull-out paper tongue catches your printed documents up to DIN A4 in size. The special 'Floor-to-Desk' principle, developed by DICOTA, means that the printer and mains adapter remain completely wired within the case during use. The notebook can be freely used on the table.

Data is conventionally transferred by means of printer cables or via Bluetooth. The printer is operated and the battery is charged via the 220 V low heat device connector on the outer shell of the case. The low heat device connector can be covered with a rubber cap for transportation. The detachable trolley system ensures an particularly convenient transportation of your mobile office. If you should at some stage not need the trolley function, the trolley system can be very simply removed with a quick movement. The DataBox is suitable for all popular notebooks, and for mobile printers HP OJ 100 and Canon iP100 – with or without support for the Canon Portable Kit. Other printers available upon request. The printer mounting for the mobile printer HP OJ 100 or Canon iP100 integrated in the case box, depending on the model. When you replace your printer, this printer mounting can be replaced by the other model (available as an optional extra) simply by undoing four Allen screws.
