

SECURITY LOCK

Simple, practical and effective. Ideal for the office, car or hotel.

Security at your fingertips T-Lock, Nano Lock and Wedge Lock

DICOTA is the experienced specialist for mobile security solutions. Using a notebook lock is one of the simplest physical measures you can take to improve your device security, especially in environments where there is an increased risk of theft. A lock secures your device to a fixed object and its visible presence alone has a deterrent effect when it comes to opportunistic theft.

This security provides peace of mind and focus. When you know that your device is protected, you can concentrate on your work without worrying about losing valuable data. A lock is therefore essential in cafés, in libraries and in shared workspaces.

DICOTA covers all the requirements. The portfolio includes locks for all common slot types (T-Lock, Nano Lock, Wedge Lock) as well as universal solutions for flexible and cross-device applications. The right answer for every security requirement.

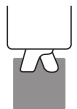

There are three common types of security lock: the T-Lock, the Nano Lock and the Wedge Lock. They differ only in terms of the size of their opening. In addition to special locks designed for the respective slot, universal solutions are therefore also available that are compatible with all three variants.

T-LOCK

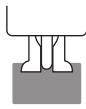

7 × 3 mm

WEDGE

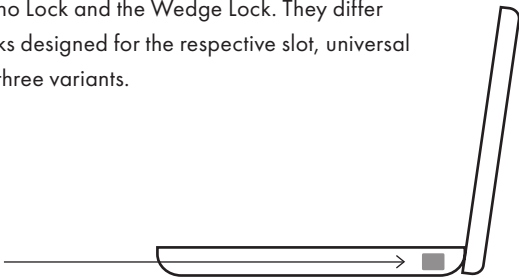

4,5 × 3,2 mm

NANO

6 × 2,5 mm

For individual or multiple users

DICOTA locks are available as individual-user solutions for business travellers or individual workstations, and as multiple-user versions. This is ideal for IT administrators who need to have access to all of the devices in the company but at the same time want to make it possible for individual users to take their devices with them so that they can work from home.

INDIVIDUAL USERS

Only the user is able to open the specific lock.

MULTIPLE USERS

Master keys can open all the locks in the system.

User 1 is able to open the lock belonging to User 1.

User 2 is able to open the lock belonging to User 2.

User X is able to open the lock belonging to User X.
